}
```

Hi Kane,

The strucure in vega documentation can change the color of lables but how about the filter function we created, it doesn't work

Not possible with Vega-lite, but possible with CSS.

Check this post: <https://edstem.org/au/courses/6022/discussion/635254>

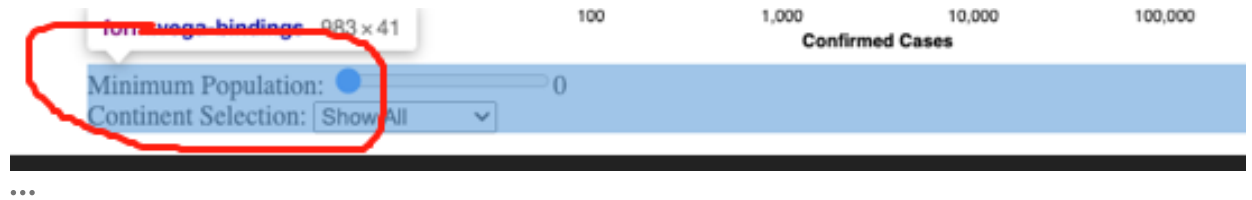

Cheers,

Kane

Sorry Kane, I didn't understand, the aim for this link seems chaging the position, how about the color of text

K

Kane Li STAFF 4mth

That shows you how you can get the CSS div/class of the selection box. Refer to our week-5 studio code for how to change the text of a given selector.

cheers,

Kane

Hello,

So when you call your chart in the index.html file, the usual syntax is:

```
<div id="...."> >/div>
```

```
<div id="heat_map" ></div>
```

this will simply result in a default coloured filter font color

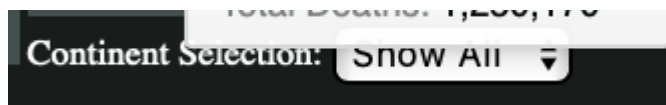

If you want to change the font color for that, you can try:

```
<div id="heat_map" <span style="color: white;">Continent Selection: </span>></div>
```

so simply add **Label Name: ** next to the id

The result:

Hope this helps :)
